## *The fuel gauge:*

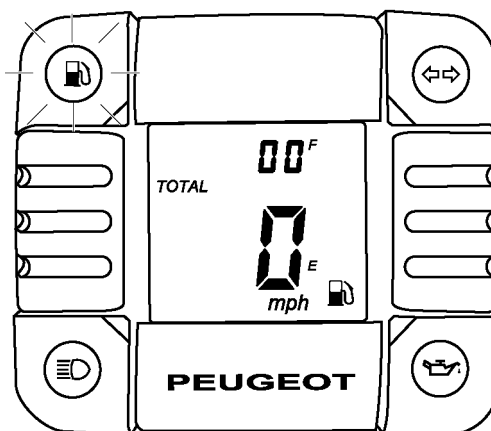

The fuel level is shown by lighting of the segments 1 to 8 which represent the fuel level

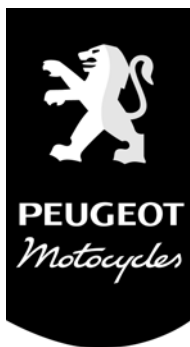

In the reserve position, the last or last two segments flash and the fuel low level warning light comes on

When the tank is completely empty, the fuel low light stays on, all the segments disappear.

## ***Changing units:***

The speed unit can be selected (1) (km/h or mph) by a procedure which uses operating different functions on the machine

This function is available at all times on the vehicle whatever the distance it has covered

This procedure should be completed in under 15 seconds and may be carried out as many times as required without damaging the system

## **Procedure:**

Engine stopped, ignition off

- Set the headlight dip/main switch to the dip position
- Set the flasher switch to the neutral position
- Turn on the ignition and start the engine immediately
- Operate the flashers (right or left), stop them after counting exactly 5 flashes
- Flash the headlight
- Check that the speed unit display is correct
- Stop the engine
